

Laksh Goyal

San Francisco, CA | +1 (858) 298-8940 | lgoyal@ucsd.edu | lakshgoyal.com | linkedin.com/in/lakshgoyal | github.com/lgoyal6

EDUCATION

University of California San Diego

GPA: 3.6

B.S. in Computer Science; Minors in Cognitive Science and Business Economics

Expected Graduation: Jun 2028

Relevant Coursework: Algorithms & Data Structures; Operating Systems; Software Engineering

EXPERIENCE

GMI Cloud (NVIDIA Reference Platform Cloud Partner)

Mountain View, CA

Software Engineer Intern, AI Platform

Jun 2026 – Present

- Cut inference cost 47% against Fable 5 by routing requests to GLM 5.2 first, escalating to Opus 4.8 only when an automated checker rejects the output; 94/100 on EvalPlus, [published by GMI Cloud](#)
- Built Mint on FastAPI, PostgreSQL, and React, orchestrating enrichment, classification, and human review, cutting lead-research time 90% against the manual workflow and Apollo and Exa spend 75% against per-record enrichment
- Ranked 8 routing setups on cost per solved task, \$0.0045 against \$0.0090, where the pass-rate leader cost 2× more

DR Financial

Remote

Software Engineer Intern

Jul 2026 – Present

- Designed the production credentialing pipeline that decides whether a doctor can be contracted, raising auto-clearance from 40.8% to 72.7% by reranking a classical shortlist with a language model rather than replacing it
- Caught every excluded doctor across 1,500 adversarially sampled cases, holding the miss rate under 0.20%, where one missed exclusion voids a signed hospital contract and an extra review costs minutes per case
- Showed only 3.1% of credential fields confirmable at the CAPTCHA-walled boards that issue them, capping automation

Inovacity

San Diego, CA

Software Engineer Intern

Jan 2026 – Jun 2026

- Built a multi-tenant clinical imaging platform where each organization sees only its own patients, centralizing authorization behind one policy layer across 96 endpoint-role combinations
- Gated billing codes behind clinician approval with an LLM workflow that drafts them and writes them out as FHIR R4 records, cutting documentation time 60% and computing healing trajectory across visits

AWS Student Builder Club @ UC San Diego | Technical Workshops and Projects Lead

San Diego, CA

- Took 20 club members from no cloud experience to deploying on EC2, EKS, Lambda and S3 themselves, running every workshop myself along with the guided AWS certification session

PROJECTS

SitRep: Team Project Management App | TypeScript, Cloudflare Pages, D1, Playwright

[Live](#) | [GitHub](#)

- Led 11 engineers through 5 Agile sprints to ship a deployed team-management app supporting Scrum, Kanban and XP boards, gating every pull request behind a 5-stage CI pipeline ending in Playwright browser tests
- Collapsed the round trips a page needs from 7 to 1 with a single GraphQL schema over Prisma, served from Next.js

Basis: Recomputes Brokerage Positions from Trade History | Java 21, Spring Boot, PostgreSQL

[Live](#) | [GitHub](#)

- Found 14 cost-basis errors across 9 real brokerage accounts with a double-entry ledger in Java that recomputes every position from the customer's own trade history and names the probable cause of each error
- Serialised writes per account through a Postgres advisory lock so two concurrent sales of the same shares cannot both succeed, a guarantee no database constraint provides and one a race test fails without

GPU Broker: One Queue Across Cloud, Spot and a Lab GPU | Python, boto3, FastAPI

[Live](#) | [GitHub](#)

- Shipped a GPU job broker for the club I lead, putting paid cloud, spot instances and a shared lab A6000 behind one queue, reclaiming 16% of the shared credit pool from machines held but not used
- Survived 315 spot interruptions across 100 concurrent training jobs with zero work lost, checkpointing each job and resuming it from its last saved step, and completed every one exactly once against an uninterrupted control run

Hacklist SF: Hackathon Discovery & Calendar | JavaScript, Cloudflare Workers, iCalendar

[Calendar](#) | [GitHub](#)

- Grew a self-updating calendar to 100 active users, publishing 56 events against the largest hand-curated Bay Area equivalent's 12 while matching every one of its listings, at \$0/month on keyless sources
- Made the pipeline refuse to publish any record it cannot date, holding 26 unattended runs clean where a hand-curated list goes 62% stale within 7 days and never showing a subscriber a dead event

ACHIEVEMENTS

7 Hackathon Wins: [1st Akash](#), [2nd Replay](#) (both AWS), [2nd Bow Capital Defense](#), [1st Convex](#), [1st Runloop/Reflex](#)

OpenAI Student Collective: Chosen as 1 of 140 U.S. and Canada Leads across 70 universities from 25,000 applicants

Founding Engineer, Pylon (\$100K raised): counter-UAS sensor startup admitted to the Bow Capital incubator

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java 21, C++, Go, Rust, C, SQL, Bash, HTML/CSS, Swift, Kotlin, Scala, R

AI & Backend: React, Next.js, Node.js, GraphQL, Prisma, Relay, FastAPI, Spring Boot, Flask, REST APIs, gRPC, PostgreSQL

Data & Infrastructure: PostgreSQL, Redis, SQLite, Docker, Kubernetes, AWS EKS, EC2, Lambda, S3, IAM, Terraform

Systems & Tooling: Git, GitHub Actions, CI/CD, code reviews, Playwright, testing, documentation, Agile, communication
